

ENDO G polyclonal antibody

Catalog: BS60425

Host: Rabbit

Reactivity: Human, Mouse, Rat

BackGround:

Endonuclease G (ENDO G), a nuclear encoded protein, localizes to the mitochondria (1). This sugar-nonspecific nuclease, responsible for major mitochondrial nuclease activity, preferentially cleaves single-stranded DNA(ssDNA). Synthesized as a propeptide with an amino-terminal presequence that targets the nuclease to mitochondria, ENDO G translocates to nuclei on apoptotic stimulation and act as a nuclease without sequence specificity. Both exonucleases and DNase I stimulate the ability of ENDO G to generate double-stranded DNA cleavage products at physiological ionic strengths, suggesting that these activities work in concert with ENDO G in apoptotic cells to ensure efficient DNA breakdown.
