

B4GALT6 polyclonal antibody

Catalog: BS60629

Host: Rabbit

Reactivity: Human, Mouse

BackGround:

β -1,4-galactosyltransferases (β -1,4-Gal-T) are type II membrane-bound glycoproteins that are substrate-specific and function to transfer galactose in a β -1,4 linkage to an acceptor sugar. There are seven members of the β -1,4-Gal-T family, all of which are directed to the Golgi apparatus through a hydrophobic sequence at the N-terminus. β -1,4-Gal-T6, also known as B4GALT6, is a 382 amino acid single-pass type II membrane protein that localizes to the Golgi apparatus and belongs to the β -1,4-galactosyltransferase family. Expressed at high levels in adrenal gland and brain and present at lower levels in lung, liver and colon, β -1,4-Gal-T6 uses magnesium or zinc to catalyze the UDP-dependent biosynthesis of glycosphingolipids. The gene encoding β -1,4-Gal-T6 maps to human chromosome 18, which houses over 300 protein-coding genes and contains nearly 76 million bases.

Product:

1 mg/ml in Phosphate buffered saline (PBS) with 15 mM sodium azide, approx. pH 7.2.

Molecular Weight:

~ 45 kDa

Swiss-Prot:

Q9UBX8

Purification&Purity:

The antibody was affinity-purified from rabbit antiserum by affinity-chromatography using epitope-specific immunogen and the purity is > 95% (by SDS-PAGE).

Applications:

WB: 1:500~1:1000

Storage&Stability:

Store at 4 °C short term. Aliquot and store at -20 °C long term. Avoid freeze-thaw cycles.

Specificity:

B4GALT6 polyclonal antibody detects endogenous levels of B4GALT6 protein.

DATA:

Western blot (WB) analysis of B4GALT6 polyclonal antibody at 1:500 dilution

Lane1: HEK293T whole cell lysate

Lane2: A549 whole cell lysate

Lane3: sp2/0 whole cell lysate

Note:

For research use only, not for use in diagnostic procedure.
