

Cleaved-ADAM17 (R215) polyclonal antibody

Catalog: BS7064

Host: Rabbit

Reactivity: Human, Mouse, Rat

Background:

Tumor necrosis factor β (TNF β), also known as lymphotxin, is a pleiotropic cytokine. TNF α , also known as cachectin, is a cytokine that binds to the same receptors, producing an array of effects similar to those of TNF β . TNF β and TNF α share 30% amino acid homology and have similar biological activities. TNF β is produced by activated lymphocytes, including CD4⁺ T helper cell type 1 lymphocytes, CD8⁺ lymphocytes and certain B lymphoblastoid cell lines. TNF α is produced by several different cell types, including lymphocytes, neutrophils and macrophages. TNF β and TNF α can modulate many immune and inflammatory functions while having the ability to inhibit tumor growth. TACE (for TNF α converting enzyme) is a metalloproteinase that cleaves the membrane-bound TNF α precursor to release soluble TNF α .
