

CYP4F2 (M66) polyclonal antibody

Catalog: BS9135

Host: Rabbit

Reactivity: Human, Mouse, Rat

BackGround:

CYP4F isoforms are involved in the oxidation of important cellular mediators, such as leukotriene B4 (LTB4) and prostaglandins. CYP4F2 catalyzes ω -hydroxylation of LTB4 to a less potent proinflammatory eicosanoid, 20-OH-LTB4, as well as arachidonic acid. CYP4F2 is expressed in liver and kidney. Its expression is repressed by peroxisomal proliferators and induced by retinoic acid. X-linked adrenoleukodystrophy (X-ALD) is a severe neurodegenerative disorder biochemically characterized by elevated levels of very long-chain fatty acids (VLCFA). CYP4F2 participates in the ω -hydroxylation of VLCFAs, which may provide an alternative mode of treatment for X-ALD patients.
