

# TfR mutant protein:W528A,recombinant(hFc Tag)

Catalog: 1	NCP0124
------------	---------

Host: Human

293F

## **BackGround:**

Cellular uptake of iron occurs via receptor-mediated endocytosis of ligand-occupied transferrin receptor into specialized endosomes . Endosomal acidification leads to iron release. The apotransferrin-receptor complex is then recycled to the cell surface with a return to neutral pH and the concomitant loss of affinity of apotransferrin for its receptor. Transferrin receptor is necessary for development of erythrocytes and the nervous system (By similarity). A second ligand, the heditary hemochromatosis protein HFE, competes for binding with transferrin for an overlapping C-terminal binding site. Positively regulates T and B cell proliferation through iron uptake. Acts as a lipid sensor that regulates mitochondrial fusion by regulating activation of the JNK pathway. When dietary levels of stearate (C18:0) are low, promotes activation of the JNK pathway, resulting in HUWE1-mediated ubiquitination and subsequent degradation of the mitofusin MFN2 and inhibition of mitochondrial fusion. When dietary levels of stearate (C18:0) are high, TFRC stearoylation inhibits activation of the JNK pathway and thus degradation of the mitofusin MFN2.

Product:
PBS,pH7.4
Size:
100ug/1mg
Swiss-Prot:
P02786
Purification&Purity:
The protein was purified from 293F and the purity is >

95% (by SDS-PAGE). **Molecular Weight:** 

Source:

The protein has a calculated MW of 76 kDa.

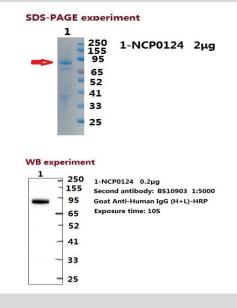

### **Storage&Stability:**

Store at 4 °C short term. Aliquot and store at -20 °C long term. Avoid freeze-thaw cycles.

#### **Protein length:**

AA Leu 122 - Ile 550 (Accession # P02786)

**DATA:** 

## Note:

For research use only, not for use in diagnostic procedure.
