

Ovalbumin polyclonal antibody-FITC labeled

Catalog: BS31125

Host: Rabbit

Reactivity: Chicken

BackGround:

Ovalbumin is the major protein of chicken egg white and a classic model antigen. This FITC-conjugated antibody enables direct fluorescence-based detection of ovalbumin in immunofluorescence and flow cytometry applications.

Product:

1mg/ml in 0.01M Phosphate Buffered Saline, pH 7.2, 50% glycerol, 0.05% Sodium Azide.

Molecular Weight:

~42.9 kDa (ovalbumin) + FITC conjugate

Swiss-Prot:

Purification&Purity:

Protein G purified

Applications:

ELISA: Use at an assay dependent dilution.

Storage&Stability:

Store at 4 °C short term. Aliquot and store at -20 °C long term. Avoid freeze-thaw cycles.

Specificity:

Reacts only with Ovalbumin.

DATA:

Western blot analysis of Vinculin expression in PC12 (A), HepG2 (B), Hela (C) whole cell lysates.

Immunohistochemical analysis of Vinculin staining in human heart formalin fixed paraffin embedded tissue section. The section was pre-treated using heat mediated antigen retrieval with sodium citrate buffer (pH 6.0). The section was then incubated with the antibody at room temperature and detected using an HRP conjugated compact polymer system. DAB was used as the chromogen. The section was then counterstained with haematoxylin and mounted with DPX.

Immunofluorescent analysis of Vinculin staining in HepG2 cells. Formalin-fixed cells were permeabilized with 0.1% Triton X-100 in TBS for 5-10 minutes and blocked with 3% BSA-PBS for 30 minutes at room temperature. Cells were probed with the primary antibody in 3% BSA-PBS and incubated overnight at 4 °C in a humidified chamber. Cells were washed with PBST and incubated with a DyLight 594-conjugated secondary antibody (red) in PBS at room temperature in the dark. DAPI was used to stain the cell nuclei (blue).

Note:

For research use only, not for use in diagnostic procedure.
