

**DHX35 polyclonal antibody**

Catalog: BS33938

Host: Rabbit

Reactivity: Human

BackGround:

Probable ATP-dependent RNA helicase DHX35: Acts as a co-sensor in RIGI-mediated antiviral innate immunity. Enhances RIGI recognition of viral nucleic acids and interacts with RIGI and MAVS to form a signaling complex which triggers downstream signaling cascades that lead to the induction of type I interferons and pro-inflammatory cytokines during the antiviral innate immune response

Product:

1mg/ml in 0.42% Potassium phosphate, 0.87% Sodium chloride, pH 7.3, 30% glycerol, and 0.01% sodium azide.

Molecular Weight:

~78.9 kDa

Swiss-Prot:

Q9H5Z1

Purification&Purity:

The antibody was purified by immunogen affinity chromatography.

Applications:

WB (1/500 - 1/1000)

Storage&Stability:

Store at 4 °C short term. Aliquot and store at -20 °C long term. Avoid freeze-thaw cycles.

Specificity:

Recognizes endogenous levels of DHX35 protein

DATA:

Immunohistochemical analysis of Chromogranin A staining in human small cell lung carcinoma formalin fixed paraffin embedded tissue section. The section was pre-treated using heat mediated antigen retrieval with sodium citrate buffer (pH 6.0). The section was then incubated with the antibody at room temperature and detected using an HRP conjugated compact polymer system. DAB was used as the chromogen. The section was then counterstained with haematoxylin and mounted with DPX.

Immunohistochemical analysis of Chromogranin A staining in human pancreas formalin fixed paraffin embedded tissue section. The section was pre-treated using heat mediated antigen retrieval with sodium citrate buffer (pH 6.0). The section was then incubated with the antibody at room temperature and detected using an HRP conjugated compact polymer system. DAB was used as the chromogen. The section was then counterstained with haematoxylin and mounted with DPX.

Note:

For research use only, not for use in diagnostic procedure.
