

CRABP1 Recombinant Rabbit mAb

Catalog: BS50014

Host: Rabbit

Reactivity: Human, Mouse

BackGround:

This gene encodes a specific binding protein for a vitamin A family member and is thought to play an important role in retinoic acid-mediated differentiation and proliferation processes. It is structurally similar to the cellular retinol-binding proteins, but binds only retinoic acid at specific sites within the nucleus, which may contribute to vitamin A-directed differentiation in epithelial tissue.
